Laboratory 5 task:

Write at least two triggers that will be useful for your database business case.

Here you can find a short trigger example:

```
CREATE OR REPLACE TRIGGER ADD_RUNNING_COSTS
  AFTER INSERT OR UPDATE OR DELETE
  ON EMPLOYEE

FOR EACH ROW --row level trigger
BEGIN
    CASE
    WHEN INSERTING THEN
        update department set running_costs = running_costs + :new.salary
        where department_id = :new.department_id;
    END CASE;
END;
```

See to find more information about Oracle's triggers:

https://docs.oracle.com/database/121/TDDDG/tdddg_triggers.htm#TDDDG500 00
